

Opportunity Name:

Capture / BD Manager:

HOW TO USE THIS DOCUMENT

Capture planning and solutioning are vital in government contracting to align your strengths with agency needs. Capture clarifies requirements, analyzes competition, builds relationships, and ensures proposal readiness. Solutioning tailors innovative, compliant approach demonstrate your ability to deliver results.

GovDash makes recording this data quick and easy with the added benefit of using this crucial information when creating a response within the Proposal Cloud. Learn how your team can utilize the Pipeline to strengthen your capture and solutioning processes using GovD

Work through the tabs for **Analysis**, **Intel** and **Solutions** with your capture and proposal teams the questions you see in each of those tabs are the same questions you will see in the GovDash platform. You can simply copy and paste your answers into GovDash to help w GovDash begins writing your proposal.

CAPTURE AND SOLUTION QUESTIONS

GovDash provides pre-set questions to help your team hone in on key details to help you determine differentiators, customer needs, risks, budgets, and more.

These questions are segmented into phases:

- Analysis includes questions relating to the customer's budget, critical companies, and changes to the scope of work.
- Intel provides questions designed to gather crucial information necessary for understanding the client's environment and needs. It ensures that all relevant details are captured to create a comprehensive view that informs strategy and decision-making throughout the proposal process.

Themes include:

- Stakeholders
- Motivation
- Requirements
- Assessments

Solution questions are used to detail the proposed approach and its associated features, benefits, and risks. This tab helps in articulating how the solution meets the client's requirements and offers a clear, compelling case for why your team is the best choice for the proj

Themes include:

- Approach
- Features
- Benefits
- Risks

All information recorded within these questions will be automatically transitioned to the solicitation response when moving an opportunity from your Pipeline to the Proposal Cloud.

SUGGESTED ANSWERS

Within each individual question, GovDash provides a Suggest Answer button that will help you and your team develop an answer to a question. If GovDash doesn't have enough information to suggest an answer for you, it will ask you for additional details as it works to dev

You can provide GovDash with more context (whether that be meeting notes, customer intel, etc.) via Upload File on each question, which it will use to develop an answer. GovDash will also utilize any documents you have uploaded to the opportunity's Documents tab fo

ANALYSIS PHASE			
Question	Response	Example/Note	
What is the customer's budget?		e.g. The funding originates from a federal grant earmarked for improving cybersecurity infrastructure.	
		e.g. While the budget is unspecified in the solicitation, historical data from similar contracts suggests a range of \$1-2 million.	
		e.g. The incumbent contractor, ABC Solutions, has a similar system and is likely to be a key competitor.	
What companies are critical?		e.g. XYZ Analytics has been identified as a critical vendor for their exclusive tools for data analysis.	
		e.g. The RFP mentions reliance on XYZ Networks for hardware, making them an essential vendor.	
		e.g. The revised SOW removes on-site support, shifting to a fully remote service delivery model.	
Are there changes to the scope of work?		e.g. The updated solicitation includes a new requirement for multi-factor authentication, which was not part of the original scope.	
		e.g. The scope now encompasses training and documentation, which requires additional resource allocation.	

INTEL PHASE			
Stakeholders			
Question	Response	Example/Notes	
Who are the decision makers?		e.g. The decision makers include the procurement officer, the IT director, and the chief financial officer (CFO), who will collectively evaluate the proposal based on cost, technical fit, and compliance.	
Who is paying for this?		e.g. Decision-making authority rests with the selection committee, which includes stakeholders from project management, IT, and finance departments. e.g. This initiative is funded by a Department of Defense (DoD) contract under its IT modernization program, with payments managed by the Defense Finance and Accounting Service (DFAS).	
Who are the end users?		e.g. This project is financed under a grant from the Department of Homeland Security (DHS), designated for enhancing cybersecurity resilience e.g. The primary users are field technicians who will utilize the system for real-time updates and scheduling during service calls.	
		e.g. The end users are agency employees across multiple departments, who will benefit from streamlined workflows and improved access to data.	
Motivation			
Question	Response	Example/Notes	
Why is this being procured?		e.g. The agency is procuring this solution to replace outdated legacy systems and enhance operational efficiency across departments	
		e.g. This procurement is driven by a federal mandate requiring compliance with new cybersecurity standards by the end of the fiscal year	
Why is this a priority for the organization?		e.g. The organization prioritizes this initiative to meet strategic goals outlined in their five-year modernization plan.	
		e.g. The procurement aligns with the organization's commitment to sustainability, as the new system will reduce energy consumption by 25%	
Why is the current solution not working?		e.g. Frequent system outages and slow response times have caused delays in mission-critical operations.	
		e.g. The system relies on outdated technology, which is no longer supported by the vendor, leading to increased maintenance costs and security vulnerabilities	
Why is this a priority for the decision maker?		e.g. The decision maker is focused on reducing operational risks and improving the reliability of mission-critical systems under their purview.	
		e.g. The decision maker is under pressure to meet performance targets tied to federal funding requirements.	
What are the challenges?		e.g. The primary challenge is migrating data from multiple legacy systems while minimizing disruptions to ongoing operations.	
		e.g. There is a lack of in-house expertise to manage the technical complexity of the new solution, requiring extensive training and support.	
Requirements			
Question	Response	Example/Notes	
What are the key personnel requirements?		e.g. The project requires a certified project manager (PMP) with at least 10 years of experience managing government contracts.	
		e.g. Key personnel include a cybersecurity specialist with CISSP certification and experience in federal compliance standards (e.g., FISMA, FedRAMP)	
What vehicle is being used?		e.g. This project is being executed through the NASA SEWP (Solutions for Enterprise-Wide Procurement) contract vehicle.	
		e.g. The agency is using a BPA (Blanket Purchase Agreement) under its existing IDIQ (Indefinite Delivery/Indefinite Quantity) framework	
What tools are they using?		e.g. The project requires the use of Jira and Confluence for task tracking and documentation during the development process.	
		e.g. Current tools include Tableau for data visualization, while the proposed solution recommends transitioning to Power BI for enhanced analytics.	
Assessments			
Question	Response	Example/Notes	
Why should we bid?		e.g. We have a strong past performance record on similar government contracts, which gives us a competitive edge in the evaluation process.	
		e.g. The project aligns perfectly with our core capabilities in cybersecurity and cloud migration, and we have the necessary certifications to meet compliance requirements.	
Why should we not bid?		e.g. The solicitation timeline is too short for us to prepare a competitive proposal or allocate necessary resources without compromising other commitments.	
		e.g. Key personnel with the required qualifications and clearances are not available within the timeframe specified in the solicitation.	

SOLUTION PHASE			
General			
Question	Response	Example/Notes	
Describe the win theme(s) you want GovDash to write to		Suggest 3–4 win themes. Examples of win themes include low cost, low risk, performance on similar projects, proven expertise, qualifications, innovation, or proven solutions. Remember to align your win themes with the structure of the solicitation, the SOW/PWS, and the evaluation process. e.g. Emphasize our ability to deliver innovative and cost-effective solutions within tight deadlines, backed by a strong track record of successful projects for similar clients.	
Provide any other information that may be useful for generating a response		e.g. Highlight our technical excellence in cloud migrations and integration services, supported by skilled and certified professionals. Does not have to be a full narrative it can be a few bullet points. e.g. The project requires compliance with Section 508 accessibility standards and extensive experience in data migration. e.g. Mention our capability to quickly mobilize resources due to our established network of contractors and vendors.	
List your teaming partners for this bid and what their roles will be		If you have teaming partners you can list them and I suggest uploading or adding information about their capabilities and the areas of the SOW/PWS that they will cover. e.g. ABC Technologies: Responsible for providing specialized hardware and software solutions for the project.	
Approach			
Question	Response	Example/Notes	
What is the level of effort?		Does not have to be a full narrative it can be a few bullet points. e.g. The project requires a team of 5 full-time personnel over 6 months, including roles such as project manager, system architect, and developers, with additional support for quality assurance.	
What is the pricing strategy?		e.g. This initiative will require moderate effort, leveraging existing systems for integration while dedicating resources to training and knowledge transfer. e.g. We will use a fixed-price approach to ensure transparency and predictability for the client while accommodating minor scope changes within budget.	
How will we implement this solution?		e.g. To remain competitive, we will offer a cost-plus pricing model, providing full cost breakdowns while ensuring fair profit margins. e.g. We will deploy a dedicated team to perform a comprehensive needs assessment, develop a tailored solution, and ensure a smooth rollout with user training.	
What actions are required by the customer?		e.g. Our solution will integrate seamlessly with existing systems, leveraging APIs and automated workflows, while ensuring compliance with industry standards e.g. The client must allocate internal resources to support system testing and attend all scheduled training sessions.	
How will lines of communication be handled?		e.g. The client will need to identify a point of contact for decision-making and facilitate communication between stakeholders. e.g. We will establish a clear communication plan that includes regular status meetings, progress reports, and a dedicated project portal for real-time updates.	
What are they hoping to achieve?		e.g. A single point of contact will be designated to streamline communication and ensure all stakeholders are informed promptly. e.g. Communication channels will include email, video conferencing, and a project management tool to facilitate collaboration and information sharing. e.g. The client aims to enhance operational efficiency by implementing a streamlined process that reduces manual intervention and errors.	
What is our management approach?		e.g. They are looking to achieve compliance with industry standards and improve data security measures. e.g. The project is expected to deliver a scalable solution that supports future growth and technological advancements. e.g. We will employ an agile project management approach to allow flexibility and adaptability to changing requirements.	
How will we monitor quality?		e.g. Our management strategy includes regular stakeholder engagement, risk management, and continuous improvement practices. e.g. A dedicated project manager will oversee the project, ensuring alignment with client objectives and timely delivery. e.g. Quality will be monitored through a comprehensive quality assurance plan that includes regular audits, testing, and validation at each project phase.	
Who will be leading this project?		e.g. We will implement key performance indicators (KPIs) to measure project success and ensure adherence to quality standards. e.g. Feedback loops will be established to capture and address any quality issues promptly. e.g. The project will be led by a seasoned project manager with extensive experience in similar projects, ensuring effective leadership and project execution.	
Who are the key personnel?		e.g. The project manager will be supported by a team of experts in various domains to provide comprehensive oversight and guidance. e.g. Key personnel include the project manager, system architect, lead developer, quality assurance specialist, and client liaison. e.g. Each team member brings specialized skills and experience to ensure the project's success and alignment with client goals. e.g. The team will work collaboratively to address challenges and deliver a high-quality solution.	
Benefit			
Question	Response	Example/Notes	
How do we make the decision makers look good?		e.g. We will provide executive-friendly dashboards and regular progress reports that highlight the success and impact of their decisions e.g. The project will include opportunities for public recognition, such as press releases, case studies, or awards, showcasing their commitment to excellence. e.g. The solution will improve access to critical data, enabling faster decision-making and enhancing day-to-day productivity.	
How will we improve the lives of end users?		e.g. Our intuitive interface will reduce learning curves, saving users time and reducing frustration with system operations.	
What are the anticipated savings?		e.g. Our solution is expected to reduce operational costs by 20% annually through process automation and resource optimization. e.g. The proposed system will save approximately \$500,000 in hardware costs by leveraging existing infrastructure.	
What benefits will the customer experience?		If you can provide statistics it will make a more powerful narrative. e.g. A scalable solution that supports future growth while providing consistent performance and reliability. e.g. Improved data security and compliance with regulatory requirements, achieving 100% alignment with NIST and ISO 27001 standards, while reducing security incidents by 30% over the past year as validated by third-party audits. e.g. A scalable solution that supports future growth, enabling a 50% increase in system capacity without service interruptions.	
Features			
Question	Response	Example/Notes	
How do we do better than the competition?		e.g. Our team holds more than 50 advanced certifications across cloud technologies, far surpassing the qualifications of any other vendor in the market. e.g. We have successfully delivered 95% of similar projects on time and within budget, compared to the 80% industry average, demonstrating our ability to exceed expectations. e.g. The proposed solution includes a phased implementation plan to minimize downtime, catering to the client's need for uninterrupted operations during deployment	
How is our solution tailored to the customer's needs?		e.g. Based on the client's request for enhanced security, we have included multi-factor authentication and role-based access controls to meet their compliance and security requirements.
